Important: The exact diameter of these holes should be chosen to produce a good press fit seal with the hypodermic fuel tubes. The required diameter may depend on the LaserCam's cutting profile. Some experimentation is required. Cut several gaskets and check the resulting press fits with all 25 fuel tubes in place.

4

This gasket can be used instead of RTV to seal the fuel tubes to the middle plate.

Gasket should be cut using a LaserCam machine.
